

MobilePBX

- A Virtual Telephone System

MobilePBX is a business telephone service that offers improved customer service and accessibility. The service provides a single phone number for your company, department, and/or individual, which is able to put callers in touch with your employees - telecommuters, mobile employees, and office employees – seamlessly, wherever they may be. Employees' home, cell, or hotel phone numbers and location remain anonymous to callers.

With the **MobilePBX**, any company can have a sophisticated telephone system that will keep their business in touch 24/7, even if the business changes location or operates as a "virtual office". The service offers the following features:

- **Follow-Me** – Set-up 3 follow-me numbers for each employee. The follow-me numbers can be changed at anytime, on the Web.
- **Outbound Calling** – The MobilePBX eliminates the need for calling cards. Employees can make phone calls from wherever they are by calling the company's MobilePBX number and dialing a personal pass code.
- **Auto-Attendant** – The auto-attendant guides callers to employees, by extension, name, or department.
- **Voice Menus** – With this feature callers can interact with voice prompts to retrieve information, such as company directory or address.
- **Call Transfer** – Transfer callers to another extension or phone number.
- **Voicemail** – The voicemail feature allows you to set-up a MobilePBX voicemail box, forward voicemail to an existing voicemail system, or forward it to your email.
- **Call Screening** – Discretely screen unwanted callers.

Manage Off-site Employees

Employees working from home, abroad, or another office can be on the same telephone system as the rest of the company or department.

Manage Mobile Workers

Employees constantly on the go can always be in touch through their usual extension, without having to provide the caller with their cell or hotel number.

Consolidate Phone Expenses

The MobilePBX can be used to make outbound calls as well, so employee phone expenses are presented on a single bill, instead of having to purchase calling cards or reimburse personal phone numbers.

Web Set-up and Reporting

The service can be set-up and configured over the Web or phone at anytime. Detailed call reports and billing can also be viewed in real-time on the Web.

No Equipment Needed

The MobilePBX does not require any additional equipment and works with any phone, landline or cell.

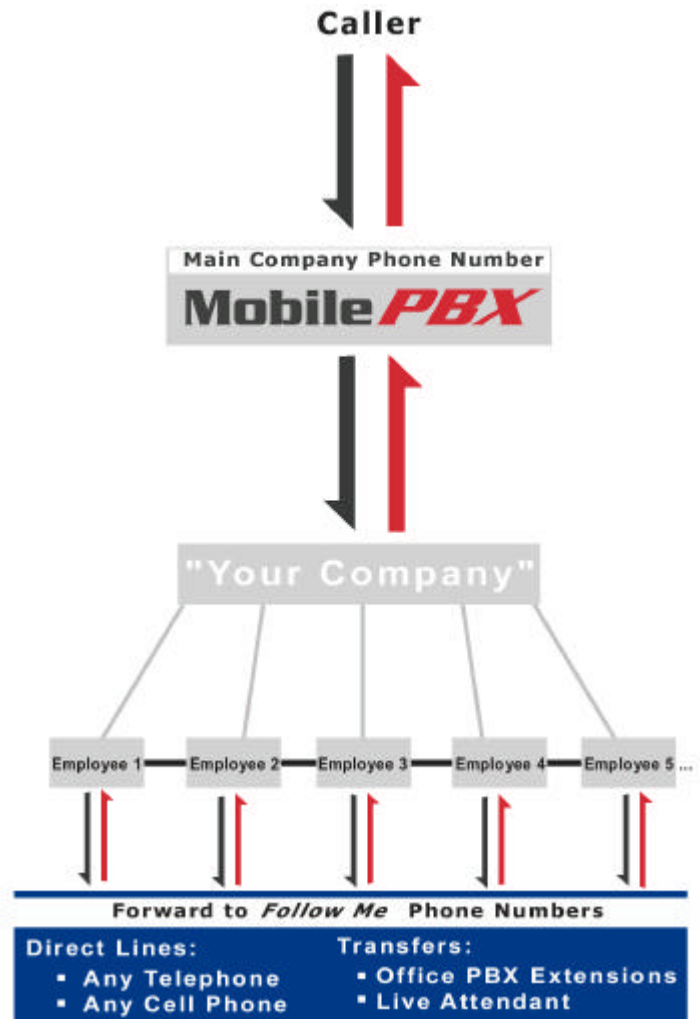

Unlimited Scalability

The MobilePBX can accommodate any number of employees, departments, and extensions.

MobilePBX

How it Works

1. Customer calls your company's MobilePBX phone number.
2. The caller hears your company's greeting and auto-attendant requests the caller's input, including caller's name.
3. The auto-attendant tries to reach the employee at the number(s) he or she has provided.
4. The auto-attendant provides the employee with the caller's name, if the employee accepts, the caller is connected.

Contact

Pricing for the MobilePBX is based on a one-time set-up fee and per minute charge. For additional information, please contact:
